

Test Summary Report – Web-Based Appointment System

1. Overview

This Test Summary Report provides an overview of the testing activities and results for the Web-Based Appointment System.

2. Test Scope

Modules Tested:

- Login and Logout
- Appointment Creation and Viewing
- Field Validations
- Basic UI and Navigation

3. Test Execution Summary

- Total Test Cases: 15
- Executed: 15
- Passed: 10
- Failed: 5

4. Defect Summary

- Total Defects Logged: 5
- High Severity: 3
- Medium Severity: 2
- Low Severity: 0

Key Defects:

- System allows booking appointments on past dates.
- Invalid email formats are accepted without validation.
- Logout button is unresponsive in some cases.

5. Risks and Impact

- High severity defects directly affect core business flows (login, appointment booking).
- Validation issues may lead to incorrect or incomplete user data.
- UI overlap may negatively impact usability on mobile devices.

6. Recommendations

- Fix all High severity defects before production release.
- Re-test critical flows (login, appointment booking, logout) after fixes.
- Perform additional UI testing on multiple browsers and devices.
- Consider adding basic automated regression checks for core flows.

7. Conclusion

The application is **not yet ready** for production release until the identified High severity issues are resolved.
